

## Butyl Methacrylate

### DISCRIPTION

Butyl methacrylate can be used as comonomer of polymethyl methacrylat. The monomer polymer has higher adhesive bonding and well elasticity, can be used for making the transparent interlayer material of complex safety glass; the polymer or copolymer of butyl methacrylate can be used as insulating potting compound, photo negative anti-halation layer, underwater paint, saloon car coating, synthetical adhesive, oil additives, finishing agent for paper, leather and textile.

### SPECIFICATION

| Item                         | Data                    |
|------------------------------|-------------------------|
| Appearance                   | Clear, colorless liquid |
| Purity %                     | 99.5 min                |
| Color (Pt-Co)                | 5 max                   |
| Water Content (K. Fischer) % | 0.03 max                |
| Acidity ( as MAA) %          | 0.01 max                |
| Inhibitor (MEHQ), ppm        | 25+/-3                  |

### PACKING

In steel drums (net weight 180kg) or iso-tank.
